

# The Most Effective Tool for Decreasing Driver Speed

## Effective

State and national research suggests that the most effective tool for decreasing driving speeds in a work zone is a notification that alerts drivers to their speeds.

## Flexible

The radar system operates as a stand-alone system with statistics recording traffic speeds in the work zone throughout the day.

## Integrates

The Radar system can be integrated with our black box recording systems to document video and speed of all oncoming traffic.

## Radar Speed and Warning System

KOHLTECH's Mobile Radar System is an ultra-low power speed measurement display and alert system designed to command the driver's attention in the work zone. Violators are shown their speed along with a flashing display, making it an ideal vehicle mounted solution for displaying speed in highway construction zones. An optional integrated message board displays customizable messages and alerts.

## Features

- ✓ 10.5" digit height for optimal legibility even in bright sunlight
- ✓ Built in rotary switch to set cut off and violator speed without connecting a computer
- ✓ White LED strobe and display flash draw attention to speeding
- ✓ Multiple vehicle mounting options.
